SUMMARY

Full-stack developer specializing in React, Next.js, TypeScript, Node.js, and Go, with freelance experience building and deploying end-to-end web applications. Experienced in responsive UI development, REST APIs, JWT authentication and RBAC, PostgreSQL and MongoDB, and third-party integrations. Comfortable taking a feature from frontend implementation through backend business logic, database design, and deployment.

TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript (ES6+), Go, Python, SQL
- Frontend:** React.js, Next.js 14 (App Router), React Native/Expo, Tailwind CSS, Framer Motion
- Backend:** Node.js, Express.js, Go/Gin, REST API Design
- Databases:** PostgreSQL, MongoDB, MySQL, Supabase
- Auth & Security:** JWT (Access/Refresh Tokens), Role-Based Access Control (RBAC), Rate Limiting, Input Validation
- State & Data:** React Hooks, Context API, TanStack Query, Zustand
- Testing:** Jest, React Testing Library
- Integrations:** Stripe (Payments & Webhooks), Socket.io (Real-Time Services), Resend
- DevOps & Tools:** Docker, CI/CD (GitHub Actions), Git/GitHub, VS Code, Vercel, Postman

PROFESSIONAL EXPERIENCE

- Freelance / Remote Full-Stack Developer** | Self-Employed (Remote) Dec 2025 – Present
- Design and build full-stack applications using Next.js/React and Node.js/Express or Go — from responsive UI through REST APIs to database persistence — for independent and client projects.
 - Implement authentication, database design, and third-party integrations (JWT, Resend) across full-stack applications.
 - Containerize and deploy backend services with Docker, using GitHub Actions for CI/CD.
- Freelance Full-Stack Developer** | PeoplePerHour (Remote) Jan 2024 – Nov 2025
- Built full-stack features end-to-end: React.js/Next.js/Tailwind CSS interfaces connected to Node.js/Express REST APIs, contributing to a 15% increase in user engagement.
 - Implemented JWT access + refresh token authentication with RBAC and token rotation, connecting protected frontend routes to backend authorization middleware.
 - Developed a real-time notification service (Socket.io) and integrated Stripe subscription billing with webhook handling.
 - Delivered client solutions 20% ahead of deadline on average with clean, Postman-documented codebases.

SELECTED PROJECTS

- URL Shortener — Flagship Full-Stack Project** — Next.js, TypeScript, Go, Gin, PostgreSQL, JWT
- Built a full-stack link-shortening platform: a Go/Gin REST API with PostgreSQL persistence, paired with a responsive Next.js/TypeScript frontend.
 - Implemented JWT auth with protected frontend routes, and PostgreSQL indexes/unique constraints for reliable short-code lookups.
 - Added backend link expiration, rate limiting, and click analytics; frontend includes validated forms, API error handling, and loading/empty states.
- Paper Trading App — Full-Stack Mobile** — React Native, Expo, TypeScript, Express.js, MongoDB
- Built a full-stack simulated stock-trading app: an Express.js/MongoDB backend paired with a React Native/Expo mobile frontend.
 - Implemented atomic buy/sell transactions with balance-consistency checks and race-condition handling, exposed via validated order forms with live price/portfolio updates.
 - Built transaction history tracking and input validation, with portfolio charts and Resend-powered transactional email.

EDUCATION

Bachelor of Science in Computer Science & Information Technology (Computer Software Engineering)
Tribhuvan University | Nov 2024 – Jan 2028 (In Progress)
